

Gynecologic and Breast Pathology Fellowship

The Gynecologic and Breast Pathology Fellowship prepares trainees who are highly qualified to pursue a career in clinical practice of these areas, either in academic medicine or in a large, tertiary-care community-based setting. The program will guide trainees toward expertise in the development of diagnostic skills in gynecologic and breast specimens with the integration of relevant cytopathology, including the use of histopathological, cytogenetic and molecular diagnostic methods. Under guidance of known experts, fellows are granted gradual responsibility and will participate in teaching residents and medical students. State of the art ancillary laboratories expose the fellows to new diagnostic and prognostic studies.

In a fast-paced environment, the Division of Anatomic Pathology receives more than 3,700 gynecologic (including products of conception and placenta), 1,400 breast, and 500 consult cases annually. In fact, the Gyn and Breast Pathology service is the home of the second heaviest volume of cases among all surgical pathology subspecialties. If desired, elective months are available in perinatal pathology, cytopathology, molecular pathology, or cytogenetics. Fellows are able to develop and expand their investigative skills and are expected to partake in a translational research project, culminating in publication of an abstract or paper and/or presentation at a conference. The department sponsors fellows' travel to present their work in a national meeting.

Program Highlights:

- Subspecialty training offered by renowned Gyn and Breast Pathology consultants
- Emphasis in our institution on oncology and precision medicine
- Whole slide imaging and telepathology technologies embedded in teaching, research, and clinical practice
- Integrated molecular pathology and cytogenetics services
- Informatics faculty for hands-on training and research
- Special emphasis on quality management and leadership training

Benefits:

- Medical, dental, disability & life insurance
- 15 days of vacation, 7 days of sick time, 10 professional development days
- Book/study materials fund and funds to travel to a conference
